**Amendments to the Specification:**

In response to the Examiner's objection to the disclosure on page 2 of the Office Action under which the Examiner has advised applicants to provide page numbers for each page of the specification, applicants are submitting herewith a copy of the original specification, formatted so that the page numbers are also copied on the bottom of each page.

On page 42, please replace the last full paragraph with the following paragraph:

-- Pre-cross-linking compositions of the present sealing material have a low viscosity and curing products obtained by curing the compositions have a low hardness and a low camber force, and also have distinguished gas shieldability, cooling medium oil resistance, etc. and can be used as an effective sealing material for the cooling medium in fuel cells requiring down-sizing as in automobile mounting, etc. and being used in high temperature circumstances. Molding of the composition is easily carried out by injection molding, etc. with lighter weight and smaller thickness. --
